

**Table 5: Threatened species in each country (totals by taxonomic group)**

Threatened species are those listed as **Critically Endangered (CR)**, **Endangered (EN)** or **Vulnerable (VU)**.

* It should be noted that for certain amphibian species endemic to Brazil, there was not time to reach agreement on the Red List Categories between the Global Amphibian Assessment (GAA) Coordinating Team, and the experts on the species in Brazil. The 2006 figures for amphibians displayed here are those that were agreed at the GAA Brazil workshop in April 2003. However, in the subsequent consistency check conducted by the GAA Coordinating Team, many of the assessments were found to be inconsistent with the approach adopted elsewhere in the world, and a "consistent Red List Category" was also assigned to these species. There was not time to agree these "consistent Red List Categories" with the Brazilian experts before the release of the *IUCN Red List*, therefore the original workshop assessments are retained here. However, in order to retain comparability between results for amphibians with those for other taxonomic groups, the data used in the *Global Species Assessment* (Baillie *et al.* 2004) are based on the "consistent Red List Categories". Therefore, figures in the table below will not completely match figures shown in the *Global Species Assessment*.
